

Recycled Gypsum Powder Product Fact Sheet

Product Description

Our recycled gypsum powder is an eco-friendly and cost-effective material, processed from recycled drywall. It serves as a high-quality raw material suitable for manufacturers of gypsum wallboard and other industrial applications. This sustainable alternative offers all the performance benefits of natural gypsum with reduced environmental impact.

Analysis

>95%

Gypsum %

22.34%

Calcium (Ca)

17.90%

Sulfur (S)

6.5 - 7.5

pH

Sustainability

Made from 100% recycled materials, our gypsum reduces landfill waste and conserves natural gypsum deposits, contributing to circular economy practices.

Consistency

High-quality control ensures a consistent particle size and purity, suitable for industrial processes.

Cost Effectiveness

Recycled gypsum offers significant cost savings compared to virgin gypsum, while still maintaining product integrity and performance in applications.

Packaging

Bulk or 1 ton bags

Storage

Store in a dry, covered area

Handling

Non-hazardous, but dust masks and gloves are recommended when handling large quantities.
